Maximise your production potential
with our range of specialist Light
Production systems.

Develop every business opportunity.

Introducing our most technologically advanced Light Production Series to date. Designed thanks to a heritage in professional printing, they combine excellent image quality, high-end finishing and powerful workflow integration.

Powerful production credentials

Built to play an integral role in CRD, Print for Pay and Commercial Print environments, the imageRUNNER ADVANCE Light Production range offer outstanding possibilities. A colour series running at up to 70ppm (comprising of the imageRUNNER ADVANCE C9060 PRO and C9070 PRO) and specialist black and white series with speeds of up to 105ppm (imageRUNNER ADVANCE 8085 / 8095 / 8105) ensure there's a system – or combination of systems – to suit every production scenario.

A common, incredibly user-friendly interface ensures even the most complex projects are easy to deliver. And thanks to outstanding print quality, the imageRUNNER ADVANCE Light Production range are dependable solutions for quality on-demand.

Versatile production possibilities

Productivity sits high on the agenda of our imageRUNNER ADVANCE Light Production range. Each device integrates seamlessly into your work environment and a capacity of 9,300 sheets* on-line plus print speeds of up to 70 ppm in colour or 105 ppm in black and white epitomise the dynamic thinking behind these systems.

Add Canon's reputation for reliability and toner that can be replenished whilst printing and you're guaranteed to meet even the most stringent schedules.

Quality to count on

Whatever the scope of each production project, the imageRUNNER ADVANCE Light Production range deliver quality levels that set them apart. Incorporating a wealth of image quality know-how, every job is produced with vibrant, consistent colours or the crispest black and white text and smoothest half-tones. Diverse media handling capabilities and high-end finishing options – such as booklet making, professional punching and advanced folding capabilities – ensure prints exceed every expectation.

Improve production possibilities.

Whatever your requirements, our imageRUNNER ADVANCE Light Production range are designed to deliver. Thanks to five highly modular systems, there is a viable solution for every production, space and budgetary requirement.

Superb media handling and finishing

Provide your customers with a wealth of choice courtesy of the incredibly flexible media handling capabilities of these engines. Uncoated stocks, gloss media*, a maximum standard paper size of SRA3 (or 330.2 x 487.7mm for irregular size), plus weights as thick as 300 gsm** provide extensive possibilities.

An array of finishing options stand up to scrutiny against even high-end production engines. Professional punching (21-hole plastic comb, twin loop, colour coil, velo bind, loose leaf and Pro Click), folding (Z-folding, inner-C, outer-C, double parallel and centre folding), inserting, and saddle finishing with trimming, are all easily achievable, allowing you to offer exceptional choice to your customers.

Simple yet sophisticated

From an operator's perspective, managing the daily workload couldn't be simpler. A huge adjustable and intuitive colour touch-screen makes even complex tasks easy to control. With the help of Canon's Workflow Program, the imageRUNNER ADVANCE Light Production range can be used to maximise the efficiency and effectiveness of your operation.

Integration with Canon's Helix Production Workflow Solution enables significant, additional time and cost saving benefits, with features such as on-line ordering, job ticketing and payment, and direct integration with Variable Data Printing applications.

A Fiery based RIP can be configured with either Series, enhancing productivity and allowing each system to be effectively clustered with other devices.

Our modular, versatile engines offer excellent scope for growth.

Double parallel Fold

A huge 10.4 inch adjustable and intuitive colour touch-screen makes even complex tasks easy to control.

Progressive thinking brings **quality results.**

The strategy behind the design and development of the imageRUNNER ADVANCE Light Production range emphasises quality in every conceivable area. Beneath the sleek, modern styling and beyond the exceptional production credentials, lies a depth of innovative thinking that sets a new benchmark in environmental responsibility.

Outstanding image quality

Look forward to print quality of the highest order thanks to a wealth of innovation. The C9000 PRO Series employs a toner system that expands the colour reproduction area, providing exceptional fusing and gloss performance for the sharpest text and clearest graphics. Whilst Canon's proprietary ARCDAT real-time calibration technology ensures colours are produced consistently, by automatically measuring and fine-tuning image density throughout every job.

The 8000 Series utilises a new, small particle toner enabling excellent text / dot reproduction and outstandingly smooth and accurate half-tones.

Impressive prints

The image quality, extensive media handling capabilities and professional finishing possibilities ensure there's a significant range of applications to offer both existing and new customers.

Create eye-catching company brochures or stunning mailpieces using variable data techniques to drive home personalised, attention-grabbing messages. Deliver on-demand digital proofs to speed-up project approval. Or produce monthly financial statements and heavyweight black-and-white manuals, where consistency is assured from the first print to the last.

Exceptional environmental credentials

We set out to manufacture a range with the smallest possible carbon footprint. These devices are the first of their type to contain fire retardant bio plastic, made from plant-derived organic resources. Carbon dioxide emissions are reduced through the use of green materials and environmentally friendly logistics. Where possible, recycled plastics have also been utilised, and the noise levels of each device are especially low. Adherence to the highest international environmental standards – such as Energy Star, Blue Angel and RoHS – complete an impressive credentials list.

The imageRUNNER ADVANCE 8000 Series also boasts the lowest TEC (Total Energy Consumption) rating in its class.

Our Light Production Series
deliver quality you can
always depend on.

Create in colour:

Eye-catching company brochures

Stunning mailpieces

On-demand digital proofs

Business cards

Posters

Training collateral

Create in black and white:

Detailed personalised invoices

Product manuals

Bulletins/Newsletters

Mailings/Letter mailing
